

## Customized solutions for an unique project

In the context of a research project we have supported the company LEDtec GmbH during the implementation of a control system for mobile phones with programming service.

### Initial situation

LEDtec GmbH developed for their customers a RGB light control, which is inter alia, controllable via mobile phones. Gumpinger Software was involved in the implementation of this software as IT specialist.

### Implementation

In the context of this project, two employees had to make the implementation. We were able to bring in the following IT know-how in the project:

- Development work in Java
- Java ME
- Diverse Java mobile phone frameworks and libraries
- Evaluation of the current available mobile phone platforms

### Result

The software was successfully implemented and a prototype is available on request. Further development is planned.

*„Gumpinger Software I have seen as a reliable partner, who is the on-time delivery and quality in the implementation very important. Gumpinger Software has helped ud transborder, uncomplicated and much targeted! “*

Andreas Weyer, Geschäftsführer und Eigentümer LEDtec GmbH
